DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 7, and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,954,463 (hereinafter referred as “Ma”).

Ma discloses the invention (**amended claims 1, 7, and 11**) as claimed including a method for concurrently routing frames through a switch wherein each of the frames is formatted with one of a plurality of formats, the method comprising:

- (a) identifying the format of each of the frames (see Fig. 3, element 90, col. 1, lines 17-25, col. 6, lines 36-39, wherein distribution engine 90 determines or identifies the type of packets);
- (b) controlling the operation of the switch which reference to the format of each of the frames (see Fig. 3, element 88).

3. Claims 1, 2, 6, 7, and 11-13 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,741,594 (hereinafter referred as “Tzeng”).

Tzeng discloses the invention (**amended claims 1, 7, and 11**) as claimed including a method for concurrently routing frames through a switch (see Fig. 1) wherein each of the frames is formatted with one of a plurality of formats, the method comprising:

- (a) identifying the format of each of the frames (see Figs. 1, 3, and 4, elements 24 and 72, col. 5, lines 59-65, col. 6, lines 5-9, 20-49);

Art Unit: 2661

(b) controlling the operation of the switch which reference to the format of each of the frames (see Fig. 4, element 74, col. 8, lines 16-30).

Regarding claims 2 and 13, Tzeng discloses the switch is configured with connection states and wherein each of the frames has a first format or a second format and wherein the controlling includes controlling the connection states of the switch so that a frame with the first format has precedence over a frame with the second format (see Fig. 1, element 25, col. 5, lines 34-39).

Regarding claims 6 and 12, Tzeng discloses additional switches so that all switches form interconnected switches, the identifying including identifying at each of the additional switches the format of each of the frames, and the controlling including controlling the operation of each of the additional switches with reference to the format of each of the frames (see Fig. 1, col. 5, lines 20-31).

Allowable Subject Matter

4. Claims 10 and 17-20 are allowed.
5. Claims 3-5, 8, 9, and 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments with respect to claims 1, 2, 6, 7, and 11-13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2661

(1) US Patent 6,831, 893 (Ben Nun et al) discloses apparatus and method for wire-speed classification and pre-processing of data packets in a full duplex network.

(2) US Patent 5,923,384 (Enomoto et al) discloses data transmission system capable of routing and transmitting digital data of different types.
